

HR Manager
Dark Vision, Canada
Burnaby

December 12, 2016

Dear Sir or Madam,

I would like to submit express my interest in the Generalist Software Engineer position advertised.

I have steered my education and career in the path of gaining the most applicable skills possible precisely for a position such as this. The description for this position mentions three specific things, all of which I happen to be familiar with.

My masters thesis I wrote an application in Java which automatically detects hardware trojans in Xilinx FPGAs I was a teaching assistant at Uvic where I taught embedded systems programming with arm and C. My familiarity with these platforms will make me an excellent candidate In addition, I worked closely with Dr. Brian Wyvill whose research is focused on animation. We worked with C++, OpenGL 3, QT and the Boost library. C++ has always been my favorite programming language. Combining it with the pipeline power of OpenGL and the potential is incredible. Unlike most higher level languages I feel like I have a much better understanding of what the code is actually doing under the hood. It is the language I have had the most formal training with; I was instructed in modern techniques and coding practices during a multi-resolution signal processing class during my masters. This knowledge I have applied to each of my OpenGL projects. I made a basic first person shooter game which I called 'Zombie Hunt'. It involved basic animations using blender, AI programming and game-engine mechanics. During my studies with Dr. Wyvill I was introduced to more complex simulation techniques. Using Lagrangian mechanics, quaternions and spline paths I created a globular physics simulation. I imported a fountain object and had it spray out droplets of a liquid. These droplets were subject to attraction and repulsion forces. Tweaking the values could modify the behavior to look like water, putty, even powder. I have made videos demonstrating these projects, a URL to view them is available upon request.

I have excellent personal skills. I am an experienced team leader, a natural independent thinker, and a concise communicator. I believe that I will make a strong candidate for this position; I wish to help Dark Vision create breathtaking visual experiences. Thank you for your time and consideration.

Yours faithfully,

Nick Houghton
